Genome Enhancer release 3.1

New features

The 3.0 release of Genome Enhancer comes with the following new features:

Databases update: TRANSFAC[®], TRANSPATH[®] and HumanPSD[™] databases used in the Genome Enhancer analysis were updated to the release 2022.2. The CIViC database used for MTB report construction was updated to version 01 October 2022.

Demo reports update: all demo reports of Genome Enhancer pipeline were updated to the analysis results provided by Genome Enhancer release 3.1. The demo reports can be freely accessed with a demo account at <https://ge.genexplain.com> or at [Genome Enhancer product page](#) on our web site.

Video guidance: All Genome Enhancer related videos with analysis demo and how-to instructions were now accumulated in a [new Videos page](#) on geneXplain's web site.

Genome Enhancer Expert

Starting from release 2.0 Genome Enhancer offers to its users a powerful synergism between the automatic pipeline for multi-omics data processing of Genome Enhancer and the comprehensive bioinformatics toolbox of the geneXplain[®] platform.

You can contact us via info@genexplain.com to find out how to upgrade your current geneXplain license to the [Genome Enhancer Expert solution](#).
